EDUCATION

Bachelor of Science - Worcester Polytechnic Institute

Worcester, Massachusetts

Double Major: Computer Science and Interactive Media & Game Development

August 2020 – May 2024

GPA: 3.87/4.0, Honors with High Distinction

Related Courses: Object-Oriented Design, Technical Game Development, Web Development, Human-Computer Interaction

SKILLS

Languages: C#, Python, JavaScript, HTML, CSS, TypeScript, C, C++, Java

Frameworks / Libraries: Unity, Django, React, Node.js, Tailwind, Bootstrap, Angular

Tools: Git/GitHub, Visual Studio, [Monday.com](https://monday.com), Hardware Integration Tools, AWS

WORK EXPERIENCE

Interactive Software Developer | Northern Light Productions

June 2025 - Present

- Developed 8 full-stack interactive programs across museums nationwide, reaching audiences of over 100,000 annual visitors
- Built projects from early development through media integration, client reviews, and on-site installation
- Integrated hardware peripherals into interactive experiences, including sensors, cameras, accessibility devices, and controllers
- Expanded services into programmatic animation, technical art, and tooling for Unity development
- Maintained consistency across projects by using and contributing to an internal library to simplify project scaffolding

Student Assistant | Worcester Polytechnic Institute

January 2024 - March 2024

- Held office hours for IMGD 3000: Technical Game Development I where 50+ students could meet to discuss course projects
- Handpicked by professor due to prior proficiency in the subject area
- Troubleshooted student issues with course projects and development environments
- Hosted information sessions during the beginning of the course to help students set up development environments
- Graded and provided feedback on short-answer questions on quizzes upon request of the instructor

Intern | MassDiGi

September 2023 - January 2024

- Collaborated with a cross-functional team of 10 to continue development on an existing mobile game and its codebase
- Implemented new features such as a new interface layout, new UI popup controls, and themed content updates
- Refactored existing codebase and resolved issues involving gameplay mechanics, front-end appearance, and save data
- Integrated new art assets into the game, which resulted in improved graphics quality and a 10% performance increase
- Created builds for major updates and deployed them to the Apple and Google Play Stores for over 100 consumers to play

PROJECTS

Developer, Assistant Technical Artist | Extravehicular Activity Simulator

September 2025 - June 2026

- Developed an interactive flight simulation experience, where museum visitors can fly around and explore the outside of the ISS
- Integrated over 50 high resolution assemblies of the ISS, proposing features and alterations to reduce performance overhead
- Expanded technical knowledge into shader programming, lighting, and graphics optimizations to improve the visual experience
- Built a custom messaging protocol processor to integrate joystick and button controls from physical hardware
- Added on to the company's content management system to support ISS module labels and video clips for visitors to discover

Developer | Collections Explorer

July 2025 - April 2026

- Developed a data-driven media viewer on US currency history for the Federal Reserve Bank of Philadelphia
- Built a content management application to enable long-term support for additional pieces of currency and their information
- Implemented a custom on-screen keyboard and search feature, enabling visitors to quickly look up physical currency exhibits
- Optimized performance for installation hardware, increasing application framerate by up to 50% for high content quantities
- Supports an accessible visitor experience through accessibility devices and data integration into audio descriptions

Developer & Data Analyst | Color Clash

September 2023 - April 2024

- Researched and implemented a modification to a latency compensation technique, Time Delay, for online shooter games
- Designed and built a 3D multiplayer first-person shooter game, *Color Clash*, in Unity and C# to create and test our algorithm
- Built interfaces in-game to automate our playtesting sessions and data collection, reducing unnecessary waiting time by 20%
- Cleaned and analyzed data using Python's Pandas and Matplotlib libraries to draw conclusions about our algorithm modification
- Findings found that the algorithm reduced perceived latency by 30% and increased fairness by 50% for 150ms of latency
- Received the "Excellence in Research" award from WPI's Interactive Media & Game Development department faculty
